

Daily Gadget Finds — Method of Procedure (MOP)

Scope: All items, affiliate links, assets, and configurations that must be filled / added / replaced by the site owner before the site is production-ready and monetized.

Generated: 2026-06-20

Total Affiliate Link Placeholders: 57

Total Other Action Items: 6

How to Use This MOP

1. Work through each section in order.
2. Replace every `href="#"` / `#` placeholder with your actual affiliate URL.
3. Mark each item `[x]` as you complete it.
4. When every checkbox in this document is checked, the site is ready for production.

SECTION B: ASSETS & IMAGES (4 Items)

B.1 — Author Profile Image

File: `blog/authors.yml`

Current: `image_url: https://via.placeholder.com/150x150.png?text=DGF`

Action: Replace with your actual team logo or profile photo URL.

Suggested: Upload an image to `static/img/team.jpg` and reference it as `/img/team.jpg`, or use a hosted URL.

- [] Replaced author `image_url`

B.2 — Open Graph (OG) Image

File: `docusaurus.config.js` references `img/og-image.jpg`

Current Status: FILE DOES NOT EXIST at `static/img/og-image.jpg`

Action: Create an OG image (1200x630 px) and save it to `static/img/og-image.jpg`.

Purpose: This image appears when your site is shared on Facebook, LinkedIn, WhatsApp, Twitter/X.

Tools: Canva, Adobe Express, or Figma.

- [] Created and saved `static/img/og-image.jpg`

B.3 — PWA Manifest File

File: `static/manifest.json` — MISSING

Action: Create `static/manifest.json` for Progressive Web App support.

```
{
  "name": "Daily Gadget Finds",
  "short_name": "DGF",
```

```
"start_url": "/",
"display": "standalone",
"background_color": "#ffffff",
"theme_color": "#2563EB",
"icons": [
  { "src": "/img/favicon.ico", "sizes": "64x64 32x32 24x24 16x16", "type": "image/x-icon" }
]
```

- [] Created static/manifest.json

B.4 — Logo / Favicon Check

Files: static/img/favicon.ico, static/img/logo.svg

Status: Present

Action: Verify these are your actual brand assets and not default Docusaurus placeholders.

- [] Verified favicon.ico and logo.svg are custom brand assets

SECTION C: SITE CONFIGURATION (3 Items)

C.1 — Algolia DocSearch Credentials

File: docusaurus.config.js

Current:

```
algolia: {
  appId: 'YOUR_APP_ID',
  apiKey: 'YOUR_SEARCH_API_KEY',
  indexName: 'dailygadgetfinds',
  ...
}
```

Action: Sign up at https://docsearch.algolia.com/apply/ and replace `YOUR_APP_ID` and `YOUR_SEARCH_API_KEY` with real values.

Alternative: If you don't want Algolia, remove the `algolia:` block entirely to disable search. The navbar has a search icon that will break if these remain as placeholders.

- [] Replaced Algolia appId and apiKey OR removed algolia block

C.2 — Newsletter Backend Integration

File: src/components/Shared/NewsletterSignup.js

Current Issue: The form captures email but does NOT submit anywhere. The `handleSubmit` function is empty:

```
const handleSubmit = (e) => {
  e.preventDefault();
  setEmail('');
};
```

Action Options:

Option	Service	Effort
A	Mailchimp (free up to 500 contacts)	Low — use their embed form URL
B	ConvertKit	Low — JS snippet
C	Google Forms (free)	Low — use form action URL
D	Backend API (self-hosted)	High — requires server

Recommended: Use Mailchimp or ConvertKit. Replace the `<form>` action with your signup endpoint.

– [] Connected NewsletterSignup form to a real email service

C.3 — Footer Doc Links Verification

File: `docusaurus.config.js` (footer links)

Current: Footer links to `/docs/categories/chargers`, `/docs/categories/power-banks`, `/docs/categories/earbuds`, `/docs/categories/cases`, `/docs/categories/buying-guides`

Action: Verify these docs pages exist and have real content. If any are empty stubs, add content or remove the footer link.

Known: `docs/categories/buying-guides.md`, `cases.md`, `chargers.md`, `earbuds.md`, `power-banks.md` exist but are minimal. Expand them.

– [] Verified `/docs/categories/*` pages have real content

SECTION D: QUICK REFERENCE — ALL FILES TO EDIT

#	File	Section	Action
1	<code>blog/best-charging-cable.md</code>	A.1	Replace 7 affiliate links
2	<code>blog/best-earbuds-for-daily-use.md</code>	A.2	Replace 5 affiliate links
3	<code>blog/best-phone-cases.md</code>	A.3	Replace 8 affiliate links

6	<code>blog/desk-setup-under-budget.md</code>	A.6	Replace 3 affiliate links
7	<code>blog/must-have-accessories.md</code>	A.7	Replace 5 affiliate links
8	<code>blog/student-gadget-setup.md</code>	A.8	Replace 5 affiliate

			links
9	blog/top-fast-chargers.md	A.9	Replace 5 affiliate links
10	blog/travel-accessories.md	A.10	Replace 7 affiliate links
11	blog/authors.yml	B.1	Replace placeholder image URL
12	static/img/og-image.jpg	B.2	Create new image file
13	static/manifest.json	B.3	Create new JSON file
14	docusaurus.config.js	C.1	Replace Algolia credentials
15	src/components/Shared/NewsletterSignup.js	C.2	Add form submit endpoint
16	docs/categories/*.md	C.3	Add/verify content

SECTION E: AFFILIATE PROGRAM SIGN-UP CHECKLIST

Before you can fill any links, you need active affiliate accounts. Here's the typical order:

Priority	Program	URL	Notes
1	Amazon Associates India	https://affiliate-program.amazon.in/	Covers most products mentioned
2	Flipkart Affiliate	https://affiliate.flipkart.com/	Good for Indian buyers
3	Cuelinks / vCommission	https://cuelinks.com / https://vcommission.com/	Aggregator for multiple Indian brands
4	AliExpress Portals	https://portals.aliexpress.com/	Budget gadgets, cables

Tip: Amazon Associates links look like:

```
https://www.amazon.in/dp/ASIN_HERE?tag=YOURTRACKINGID-21
```

Always include your `?tag=` parameter or the link will not earn commission.

SECTION F: BUILD & DEPLOY CHECKLIST (After All Links Are Filled)

Run these commands after all edits to ensure nothing is broken:

```
# 1. Install dependencies (if not already done)
npm install

# 2. Test build locally - this will FAIL if any internal links are broken
# because onBrokenLinks is set to 'throw' in docusaurus.config.js
npm run build

# 3. If build succeeds, preview locally
npm run serve
```

Important: Docusaurus is configured with `onBrokenLinks: 'throw'`. If you delete any doc pages or change slugs without updating links, the build will fail. If you want a more forgiving build during development, temporarily change it to `warn`:

```
onBrokenLinks: 'warn',
```

Remember to revert to `'throw'` before production deploy.

- [] `npm run build` passes successfully
- [] `npm run serve` shows no console errors
- [] Shared a link on WhatsApp/Telegram and verified OG image appears
- [] Tested newsletter signup and confirmed email arrives
